#Getting and Cleaning Data Coursera Final Project

In this github repository i perform the final project for the coursera course on getting and cleaining data on a dataset about human activity. The following files can be found here:

#tidydf.txt The final dataframe needed to complete this course

#CodeBook.md A code book that describes the workflow and any transformations or work that I performed to clean up the data

#run_analysis.R This is the main file, because it performs all the loading and processing of the data that was needed for this assignment. Running this code will result in the final dataframe tidydf.txt.
